ABSTRACT

Knowledge results from a condition known with sensing to something object. Care nursing is an important process in providing quality care. The purpose _ of the study is to know the existence connection Among Knowledge nurses and an application of standard care nursing in patients at the Palabuhanratu Hospital, West Java. Research design quantitative with an approach *Cross Sectional* with an amount sample of 140 nurses. Test data analysis using *Chi-Square*. Research results in part big nurses have Higher Knowledge that is as many as 126 nurses (90.0%) and apply Standard Care Nursing Well that is as many as 123 nurses (87.9%). Statistical test results obtained p value = 0.015 then could conclude that there is a connection Between the knowledge of nurses and the application of standard care nursing at Palabuhanratu Hospital. Recommended could follow training in Standard care nursing to add outlook to the nurse and give appropriate service with standard care nursing.

INTRODUCTION

The nursing staff is power the longest interacting health by direct with the client so that good bad performance and quality service nursing at a house sick will very determine the quality of service health at home sick (Asnawati & Simbala, 2021). Nursing as a profession is part of society, thing this will Keep going changed rhythm with the changing community that continues continuously growing, including implementation care nursing will Keep going develop because of problem health faced Public Keep going continuously experiencing change on a man that themselves (Deanda et al., 2021).

Standard care nursing means statement refrigerated quality and can rate gift care nursing to patient/client. Connection Among quality and standard Becomes two mutual things related closely because standard could be quantified as proof service increases and worsens Wilkinson, (2006 in PPNI, 2016). Study Lubis 2020, show part big nurses (80.4%) did assessment nursing, and 19.6% of nurses still do not enough To do assessment nursing, for diagnosis nursing, there are 60.8% who have To do diagnosis nursing with good and 39.2% of nurses still do not enough in To do diagnosis nursing Buheli. The knowledge possessed by

nurses is a means of achieving nursing professionalism, and through this nursing, knowledge is expected to accelerate the process of change for the better (Nursalam, 2013).

The factor that affects a person's level of knowledge according to Yuliana Erlin (2017) is knowledge. Knowledge can be obtained from the application of personal experience or others. This experience is a way to obtain the truth of knowledge. In this case, knowledge is a form of experience that will later add more insight. The knowledge of nurses in documenting the nursing process is influenced by a lack of knowledge. Lack of knowledge of nurses will result in non-compliance with the application of documentation (Theresia & Christianni, 2022). The knowledge possessed by nurses is a means of achieving nursing professionalism, and through this nursing, knowledge is expected to accelerate the process of change for the better (Nursalam, 2013).

METHOD

Research design quantitative with approach *quasy -experiment* with the amount of the sample of 140 nurses at the Pelabuhanratu Hospital West Java. Data collection is carried out from the month April until with month of August 2022 after the nurse executor gets training in standard care nursing carried out by BP31 PPNI together committee nursing.

RESULTS

Analysis Results Univariate knowledge nurse about Standard Care Nursing at Palabuhanratu Hospital 140 respondents _ obtained that part big nurse have Higher Knowledge that is as many as 126 nurses and application Standard Care Nursing at Palabuhanratu Hospital obtained that part big nurse apply Standard Care Nursing Well that is as many as 123 nurses.

Table 1.
Distribution Frequency Knowledge Nurse about Standard Care Nursing at Palabuhanratu Hospital (n=140)

Knowledge Nurse	f	%
Knowledge Low	14	10.0
High Knowledge	126	90.0

Table 2
Distribution Frequency Application Standard Care Nursing at Palabuhanratu Hospital (n=140)

Application Standard Care Nursing	f	%
Not good	17	12.1
Well	123	87.9

Table 3
Effect Training Enhancement Knowledge Nurse with Application Standard Care Nursing at Palabuhanratu Hospital (n=140)

Knowledge nurse	Application Standard Care Nursing				Total	OR	P Value
	Not good		Well				
	f	%	f	%			
Deployment Low	5	35.7	9	64.3	14	100	6,032 0.015
High Knowledge	12	9.5	114	90.5	126	100	

DISCUSSION

The study this not in line with the results of research conducted Irhamdi Ahmad (2017) with the Knowledge Level title Nurse about Implementation Standard Care Nursing at the Health Center. Research results this show that Majority have knowledge enough which is as many as 4 people while the minority have knowledge good which is as many as 3 people and knowledge, is not enough which is as many as 3 people. Based on Thing, researchers assume that nurses with knowledge must upgrade because this is Thing's most important in increasing standard care nursing. The more tall level of knowledge a nurse has about standard nursing, the more tall understanding of the implementation of standard deep agar care To do recording useful nursing for interest clients in giving service health with base accurate and complete communication _ be written. Application Standard Standard care Indonesian nursing is very important for nurses in operating practice on all scope service nursing because nursing diagnosis is part of gift care nursing which includes the nursing process (PPNI, 2016).

Analysis Results Bivariate connection Among knowledge nurses with application standard care Nursing at Palabuhanratu Hospital as many as 140 respondents have knowledge low with application standard care nursing not enough good 5 people while those who have knowledge low with application standard care nursing both 9 people and respondents who have knowledge tall with application standard care nursing not enough good 12 people, then who has knowledge tall with application standard care nursing well 114 people.

Statistical test results obtained p value = 0.015 then concluded that there is influence Among training enhancement knowledge nurses with application standard care nursing at Palabuhanratu Hospital. OR value = 6.032 which means the knowledge of nurses will affect on implementation of standard care nursing. This thing in line with Eni's research (2020) which shows that the connection Between knowledge with Standard care nursing is mean. The correlation value shown positive could be concluded there is a connection between knowledge with Standard care in-room nursing take-care stay at House Tanjungpura University Hospital, Pontianak.

In Aini & Sriyati's research (2020) it was found that knowledge about standard nursing is good with the implementation of standard care nursing complete as many as 20 respondents and the level of knowledge about standard nursing is not enough with the implementation of standard care nursing no complete as many as 12 respondents. This thing shows that knowledge about standard care nursing will stimulate nurses in application care nursing in the Patut Hospital Inpatient Room obey West Lombok Patju . It means the more tall knowledge about standard care nursing so the more good application of standard care provided. Analysis result from nursing with care nursing in the Patut Hospital Inpatient Room Obey West Lombok Patju. Knowledge is very factor important for the implementation of documentation care nursing someone, so in To do based documentation knowledge will more good it means the more tall knowledge somebody expected the more good too recording documentation (Nursynta et al., 2017)

CONCLUSION

Based on the results study on the Influence of training enhancement knowledge nurses with application standard care Nursing at Palabuhanratu Hospital could conclude part big nurses have high knowledge, of application standard care good nursing so that could analyze there is a significant relationship between knowledge with application standard care nursing at Palabuhanratu Hospital.
