Abstract

Pancasila is the foundation or guideline for the Indonesian nation as a source of life for Indonesian people, so that in everyday life it is very necessary to apply Pancasila values, Pancasila itself can keep up with the times and can be applied in generations, including Generation Z. live in the era of globalization, which is advanced in technology and information. In this study the aim is to find out the implementation of Pancasila values for generation Z so that they can be applied in everyday life even though information technology is developing rapidly, because in the current era of globalization, generation Z is considered to have forgotten the values pancasila value. The method used is a quantitative method or a descriptive approach to literature study. As students we conducted this research as a form of concern and love for Pancasila as a guideline for Indonesian society.

Keywords: Implementation of Generation Z, Pancasila

INTRODUCTION

In today's era of globalization, technological and information advances are very rapid, rapidly causing the limitlessness of time and space. So that it has a big impact, both in terms of positive impacts and negative impacts. This can also have an effect, especially on the successor of a country, namely generations. One of them is the form of science and technology development is social media, covering public spaces in a free virtual world. So good ethics are needed in social media. Today our world has entered the world of generation Z.

Generation Z is a generation that grows along with the advancement of science and technology, so they are accustomed to using cyclone in their daily lives that are used to facilitate their lives. So generation Z is synonymous with the generation that wants something quickly, instantly, and ideally (Dewantara & Nurgiansah, 2021). The characteristics of generation Z are realistic, pragmatic, and independent. For example, when working, generation Z prefers solitude over working in a team.

The development of science and technology also does not only have a positive and negative impact. One example of its negative impact is the ideology of the nation which can be influenced by the ideology of other nations. for example, in the past the indonesian people clung to work together but now it has been eroded by the attitude of individualism that leans towards western nations. (Fortuna & Khadir, 2022). Indonesia has a diversity of ethnic groups, religions, and cultures, therefore guidelines are needed that can unite in the form of unity such as Pancasila.

Pancasila is the formulation and guideline of national and state life by all Indonesian people. Indonesians and millennials need to understand the values of Pancasila that need to be applied in everyday life. Because if the Pancasila values are not applied, they will be threatened with the integrity of the nation and state. The threat is not only from within but the threat can come from outside as well.

RESEARCH METHODS

Methods used In this study is quantitative research or descriptive approach or literature study. This research is carried out in stages by analyzing a problem then conducting a literature study and then collecting data and theories.

RESULTS OF RESEARCH AND DISCUSSION

Research Results

According to one of the journals pbi.ac.id Generation Z or the post-millennial generation is the youngest human group in the world today. They were born in the range from 1995 to 2010. According to Ryan Jenkins in his article entitled "our Reasons Generation Z will be the Most Different Generation", this generation takes advantage of the development of science and technology in activities in their lives. It's like, the technology used is as important as breathing so it can't be a day without using technology (Adillah, 2022). Because it is very dependent on Generation Z on science and technology, it can be said that currently generation Z is experiencing a great onslaught of science and technology development, so that the values of implementing Pancasila that have been instilled since long ago have begun to erode. Many generation Z do not know the meaning of Pancasila. There are also generation Z who may know the meaning of Pancasila but are not practiced in everyday life. It's as if Pacasila is just a formality without meaning. In understanding and education, the teaching of Pancasila to generation Z tends to be rigid, and boring. So that generation Z views the foundation of this Country as a very boring learning (Alvian & Faiz, 2022). Not only in the scope of generation Z, but in the scope of government also began to neglect the principle of Pancasila. Such as collusion, corruption, nepotism.

One of the proofs that globalization is eroding the values of Pancasila is that our society that once upheld mutual aid is now apathetic, individualist. Therefore, it is very important to implement the values of Pancasila to citizens, especially generation Z. Based on the book written by Hasanuddin Ali (2017) (Rachman et al., 2022) here tells the unique side of the millennial generation or generation Z. When compared to the previous generation, this generation seems inseparable from technology, especially the internet and has become part of their basic needs in everyday life.

Discussion

Pancasila values should begin to be instilled, especially in the younger generation so that the younger generation who will become the next generation of the Indonesian nation can determine the future of this nation. Although the development of science and technology is developing rapidly, the younger generation can apply the following Pancasila values:

1. The first precept. Practicing religious activities such as Friday worship, a useful weekly recitation to warn generation Z that technological sophistication can never replace God's greatness and add faith to generation Z.
2. The second precept. It can be implemented with social service events and visits to orphanages organized by the school. It is intended that generation Z must continue to make good for the public good and the manifestation of a sense of humanity.
3. The third precept. It can be applied by working together like devotional work, both in the school environment and in the community. This can advance Indonesia better amidst the current global threats.
4. The fourth precept. It can be applied by participating in elections and not voting for elections, then deliberation in choosing the Village Head or Student Council President. This generation

Z learned that decisions should not be taken in an authoritarian manner but should be the result of mutual agreement and deliberation.

5. The fifth precept. It can be applied in a way that while in school it is applied to make friends without choosing and not discriminating from background, ethnicity, race, religion, and nation. This can create justice if it does not discriminate and discriminate.

CONCLUSION

Pancasila is an ideology, Guidelines and Basics of the Indonesian State which are used as directions or instructions in carrying out the life of the nation and state. However, over time technological advances are very rapid, one of the manifestations of the development of science and technology is social media which is a wide and free public media or space to interact so that good interaction is needed to interact with others. It should be with technological advances in the age of society to be able to implement the value of pancasila, especially in generation Z. Generation Z grows and develops along with the rapid development of science and technology so that it is needed, so that in everyday life it is inseparable from technology and can be said to be generation Z as a generation that can be said to be dependent on science and technology, this is because the character of generation Z is to want everything quickly or instant and ideal, generation Z also spends more time alone, whether with his gadget, laptop, or computer. Thus giving rise to an attitude of individualism.

The progress of science and technology also has positive and negative impacts, the negative impact is the fading of our nation's ideology and starting to be influenced by the ideology of other nations. That is very detrimental to the nation, because Indonesia has so many differences including ethnicity, religion, race, and customs. Indonesian society and generation Z need to understand the value of pancasila values that need to be applied in everyday life, so as not to cause divisions. While the positive impact is in terms of technology development as before when interacting is needed face to face but now there are phones that can interact without meeting face to face, in addition to telephones there is also a very easy online shopping system without having to come to the store we can shop, and the internet that can be used to access information easily and practical so as not to waste a lot of time.

This research is not perfect so that further research is needed on the implementation of pancasila for generation Z. As is known, pancasila is one of the important pillars for the life of the Indonesian people, so it is hoped that generation z can apply pancasila values in daily life and not forget pancasila as the basis and guideline for the life of the Indonesian nation.
